

Docket No. RSW920010011US1

**ABSTRACT OF THE DISCLOSURE**

**METHOD AND SYSTEM FOR SPECIFYING A CACHE POLICY FOR CACHING  
WEB PAGES WHICH INCLUDE DYNAMIC CONTENT**

A data processing system and method are described  
5 for specifying a cache policy for caching pages which  
include dynamic content. A user is permitted to request  
a page to be displayed. The page includes multiple  
fragments. An application is executed which generates  
those fragments. The generation of fragments is are  
10 unchanged by the caching policy. Each one of the  
servlets is executed to present a different one of the  
fragments. Caching of the page fragments can now be  
processed separately from the execution of the  
application.
